Full-stack Web Development

Jeff Hogg

Full-Stack Developer | DevOps, System Architecture & API
Integration
Greater Houston

Summary

As a Full-Stack Developer, I specialize in modernizing legacy architectures, building robust API layers, and driving end-to-end system automation. My background spans over a decade of high-pressure technical roles, from developing enterprise frontend features for Webex at Cisco to framing live broadcast shots for the Super Bowl. Currently, I operate as the solo technical lead at LGI Homes, bridging the gap between full-stack development, database administration, and DevOps. In this role, I wear multiple hats: from containerizing environments and writing custom Node.js/TypeScript middleware to managing on-premise Microsoft SQL Server and MySQL databases. I actively leverage agentic IDE workflows, accelerating stored procedure optimization, complex query debugging, and code refactoring. Whether refactoring legacy systems, building CI/CD pipelines, or architecting dedicated APIs, my focus is delivering clarity, reliability, and modern technical excellence.

Experience

LGI Homes

Full-Stack Developer (Web & Data Administrator)

March 2026 - Present (7 months)

The Woodlands, TX

- DevOps & CI/CD: Modernized legacy infrastructure by transitioning manual, server-direct codebases to Git-based version control, designing and implementing an automated CI/CD pipeline with self-hosted GitHub Runners and GitHub Actions to dramatically accelerate developer workflows.
- Full-Stack Feature Development: Architected and deployed feature releases for an internal web apps, seamlessly integrating complex leasing operation data while modernizing the user interface.
- API & Middleware Engineering: Designed a dedicated API layer and developed a custom Node.js and TypeScript middleware integration to

securely query 3rd party API's, extracting and syncing organizational data into a distributed Microsoft SQL Server environment.

- Database Administration & AI Optimization: Manage, maintain, and optimize on-premise Microsoft SQL Server and MySQL databases.
- System Architecture & Operations: Serve as the sole technical lead managing containerized services (Docker/Nginx), external DNS, and SSL renewals, scaling infrastructure capabilities and advocating for modern engineering practices.

Self-Employed

Freelance Software Developer

July 2024 - February 2026 (1 year 8 months)

The Woodlands, TX

- Full-Stack Web Development: Architected and deployed 5+ custom web applications utilizing Next.js, leveraging Vercel for seamless CI/CD, serverless infrastructure, and high-performance hosting.
- E-Commerce Engineering: Designed and launched a complete e-commerce platform using Shopify, customizing the storefront architecture to optimize user experience and streamline digital sales.
- Data Migration & Integration: Executed complex data migrations for enterprise clients, writing custom Python and SQL scripts to extract, format, and reliably import legacy datasets into modern systems.
- Technical Consulting: Partnered directly with business stakeholders to translate complex requirements into actionable Scopes of Work (SOW), managing end-to-end project lifecycles to ensure on-time delivery.

Cisco

11 years 1 month

Software Engineer

December 2021 - June 2024 (2 years 7 months)

Spring, TX

- Front-End Development: Engineered scalable features for Cisco Control Hub within the Webex Calling team, utilizing Angular and TypeScript to deliver seamless administration tools for enterprise customers.
- Quality Assurance & CI/CD: Implemented comprehensive end-to-end testing suites using Cypress and maintained build pipelines in Jenkins to prevent regressions and ensure high-confidence deployments.
- Agile Collaboration: Actively contributed to daily standups, sprint planning, and rigorous code reviews, utilizing Jira for issue tracking and Confluence for technical documentation.

- Production Operations: Monitored system health and troubleshooting logs via Kibana, while managing incident response and alerts through PagerDuty to maintain platform reliability.

Camera Operator/Technical Director

June 2013 - February 2022 (8 years 9 months)

San Jose, California

- Provided technical expertise in video production, ensuring high-quality remote broadcasts and live studio shows.
- Collaborated with cross-functional teams to enhance the viewer experience for both internal and external audiences.

Program Productions

Camera Operator/Technical Director

April 2012 - December 2022 (10 years 9 months)

- Operated cameras and directed technical aspects for live broadcasts of high-profile sports events, including the World Series, Super Bowl, and NBA Finals.
- Collaborated with production teams to ensure seamless coverage and high-quality visuals, enhancing viewer engagement.

Education

San Francisco State University

Bachelor's degree, Communications · (2010 - 2012)

Napa Valley College

Associate of Science - AS, Broadcast Engineering · (2007 - 2009)
